

# Eloqua SMS Opt Out Program User Guide

It's vital for clients using our SMS application to have an SMS opt out program setup in their account. When customers text into a phone number on one of our client's accounts with a keyword referencing their desire to opt-out of SMS messaging, the client MUST comply with this request. Examples: Stop, Cancel, Opt-out, etc..

When onboarding new clients for the SMS application, we typically will setup the opt out program for them. This guide will walk you through how to setup that program in your Eloqua account.

The first step for setting up the SMS Opt-Out program will be adding a contact field called 'SMS Opt Out'

1. Log into Eloqua
2. Click the 'Settings' gear on the top right

3. Click 'Fields and Views' under the Database Setup section

## Database Setup

Manage what information is available in your Eloqua instance.

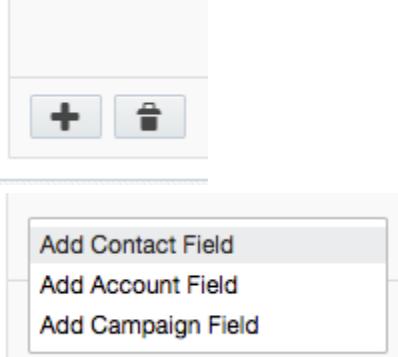

[External Activities](#)

[Fields & Views](#)

[Response Rules](#)

[Manage Picklists](#)

4. On the next page, click the plus sign on the bottom left and then click 'Add Contact Field'

5. This will pull up edit screen for your new Contact Field.

Display Name: SMS Opt Out

Data Type: Text

Field Type: Checkbox

Default State: Unchecked

Value for Checked: 1

\*Leave Value for Unchecked BLANK

Default Update Logic: Always Update

Then click 'Save'.

**General**

Display name: SMS Opt Out

Database name: C\_SMS\_Opt\_Out1

Data type: Text

Field type: Checkbox

Default State: Unchecked

Value for checked: 1

Value for unchecked:

Default Update Logic: Always update

**Contact Field Options**

Contact Field is required

Do not pre-populate this field in Eloqua for Sales

Restrict access to this field from Web Data Lookups

**Field Population Details**

**View** **Save**

6. You now have your SMS Opt Out contact field setup. The next step will be creating the Update Rule for the Opt Out Program. To do this, at the top of the page hover over Audience > Tools > Data Tools (Click Data Tools).

The screenshot shows the Pardot Home page. At the top, there are navigation tabs: Home, Orchestration, Assets, Audience, and Analytics. Below the tabs, there's a summary section titled "Total database activity last 30 days" with three metrics: "+0.01 % NEW CONTACTS", "+29 % CONTACTS WEB ACTIVITY", and "+29 % NEW VISITORS". To the right of this summary is a sidebar menu with the following items:

- Contacts
- Accounts
- Custom Objects
- Prospects
- Segments
- Lead Scoring
- Tools
  - Shared Filters
  - Shared Lists
  - Account Groups
  - Account Linkage
  - Form Update Rules
  - Data Tools
  - Data Export and Import

7. Click 'New Update Rule' in the middle of the page.

The screenshot shows the "Update Rule Set" configuration page. The title bar says "Update Rule Set". The main form has two sections: "Update Rule Set" and "Update Rules".  
In the "Update Rule Set" section:

- "Update Rule Set Name": A text input field containing "SMS Opt Out".
- "Entity Type": A dropdown menu set to "Contacts".

  
In the "Update Rules" section:

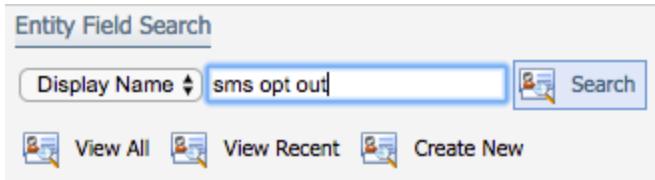

- A header "Update Rule List (Drag and drop to change the order of the rules)".
- A button "Add Update Rule" with a plus sign icon.

8. Change the Update Rule Set Name to 'SMS Opt Out', and then click the 'Add Update Rule' button

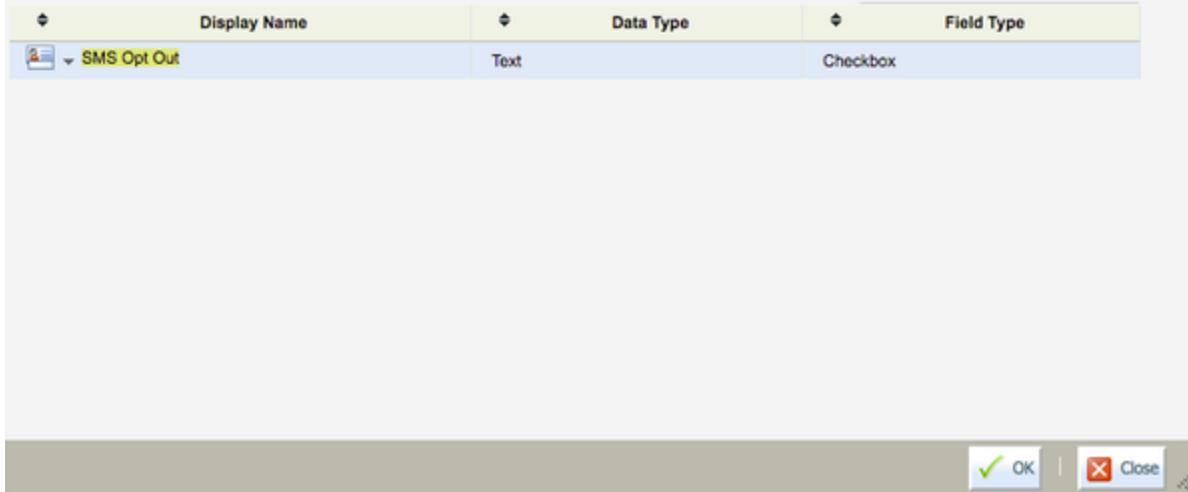

The screenshot shows a small blue pop-up window containing a contact record. It includes a photo, the contact's name, and some other details, though they are not clearly legible.

9. Click the small ID button that shows in the blue pop-up box to select a field to update

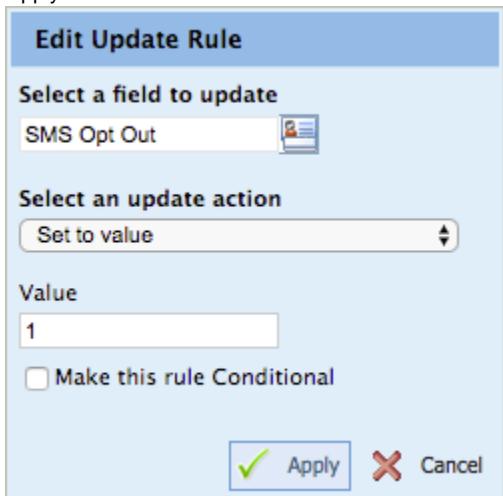

10. Type 'SMS Opt Out' in the search box, and then click 'Search'

11. Click the 'SMS Opt Out' field below, it will highlight blue (meaning you've selected it), then click the 'OK' button

12. In the blue box, select 'Set to value' from the Select An Update Action dropdown menu, and input '1' in the Value text box. Then click 'Apply'

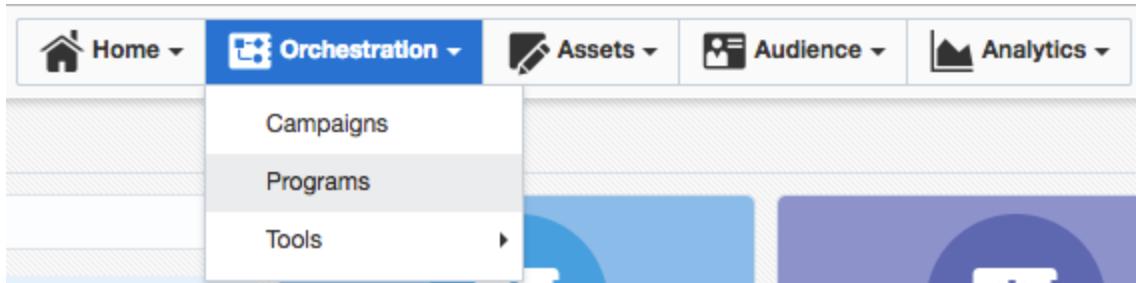

13. After you've clicked 'Apply', click the 'Save' button on the bottom right. Your update rule has now been created.

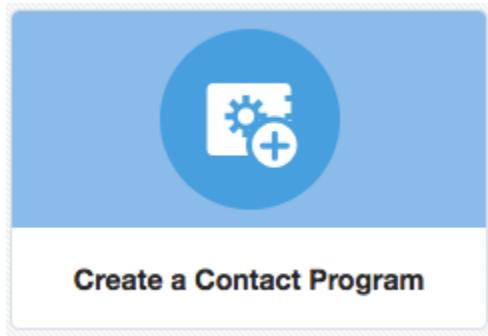

#### Creating the Opt Out Program

14. Now you will setup the actual Opt Out Program. Begin by hovering over 'Orchestration' on the top of the page and click 'Programs'

15. Click Create a new Contact Program

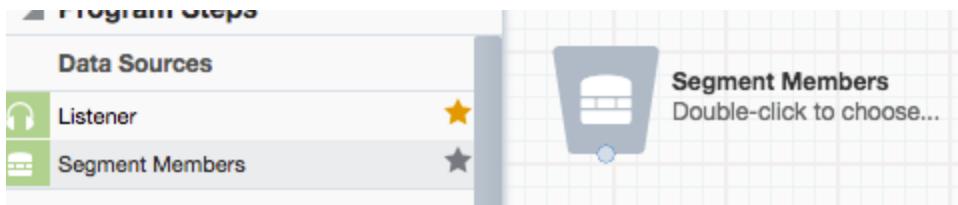

16. Select the 'Blank Contact Program' and then click 'Choose' on the bottom right corner

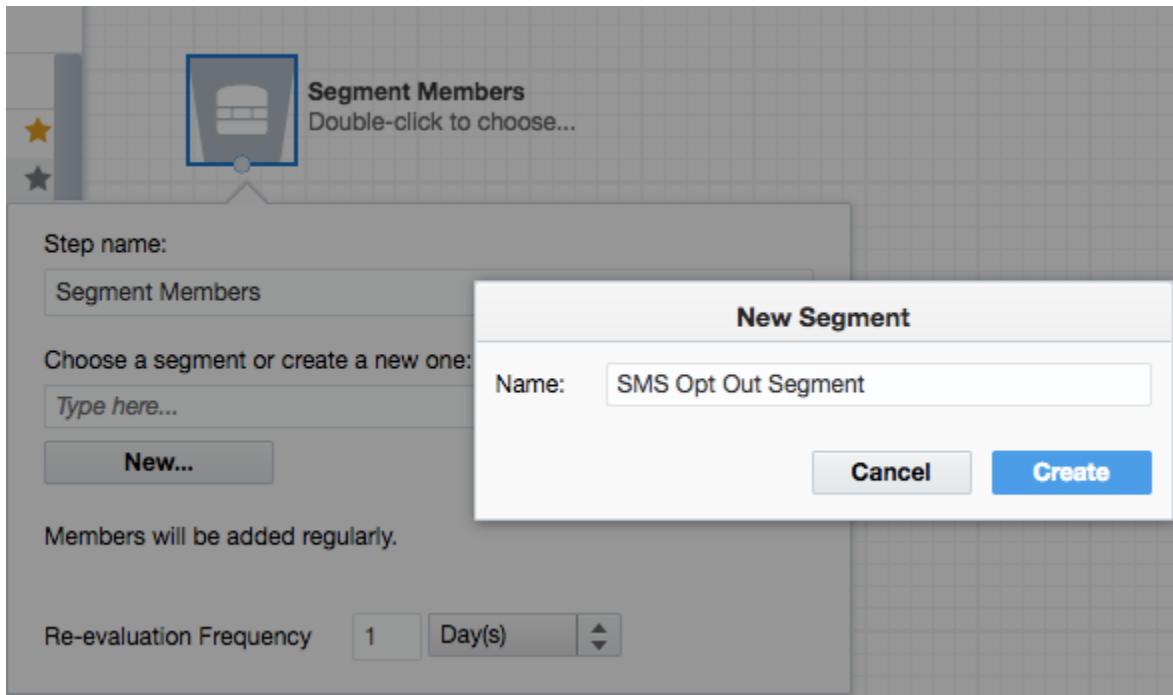

17. Click the arrow next to 'Program Steps' to collapse full list of program steps

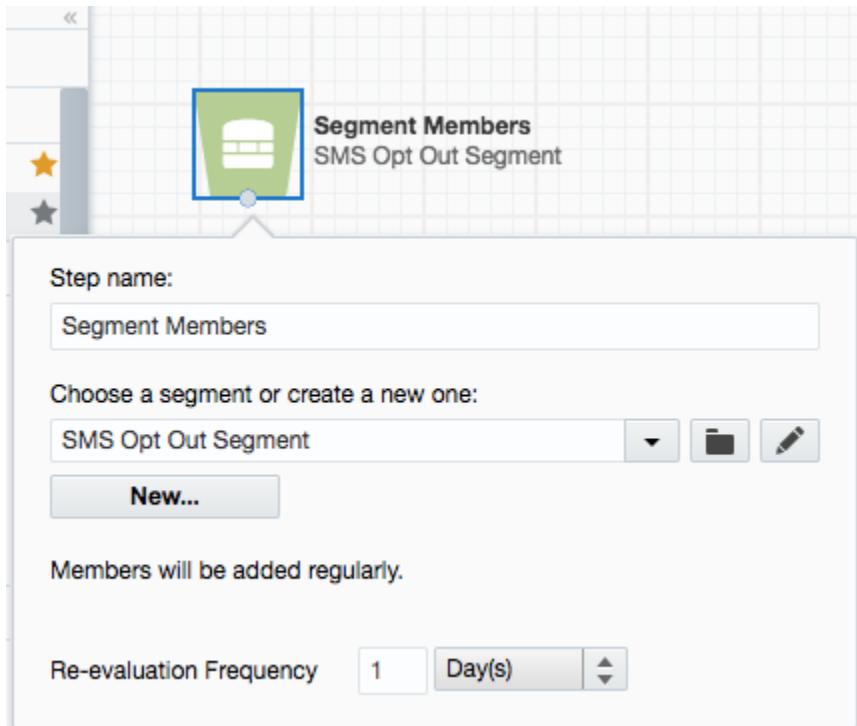

18. Drag and drop a Segment Member step onto the Program Canvas

19. Double click the Segment Members step on the canvas, and then click the 'New' button to create a new segment. Title the segment 'SMS Opt Out Segment', then click 'Create'.

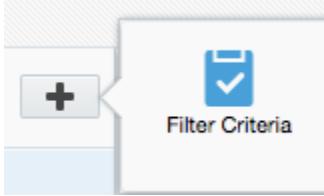

20. Once you've titled the new segment, click the pencil icon to edit the new segment.

21. On this page you add the shared filter you created to the segment. To do this, click the plus sign on the top left and choose 'Filter'

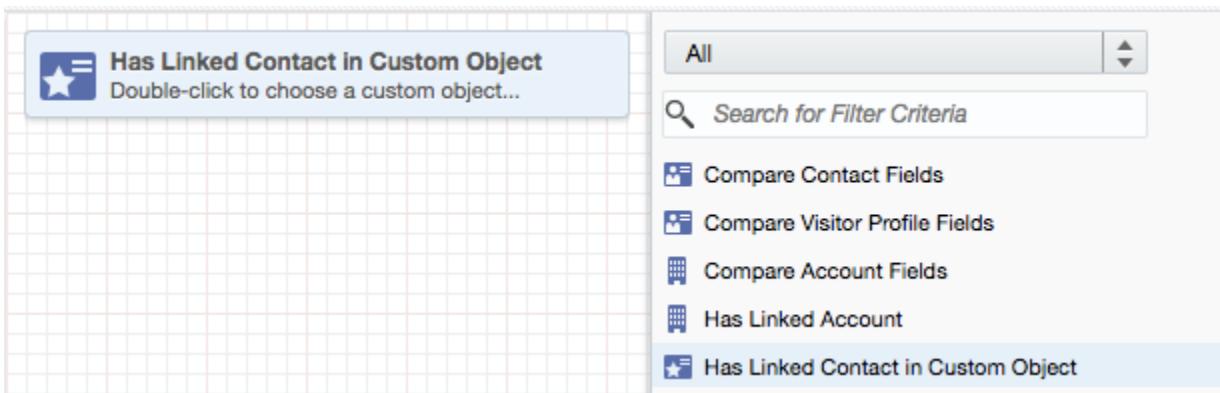

Criteria'.

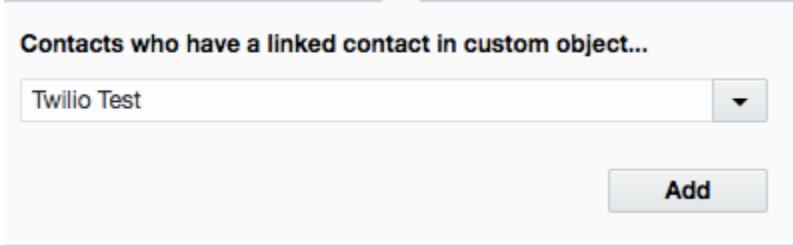

22. Double click on the title of the new Filter Criteria and change the name to 'SMS Opt Out'.

23. When you have the filter criteria selected, drag and drop a 'Has Linked Contact in Custom Object' filter onto the canvas.

24. Double click on the filter and choose your Twilio SMS Custom Object you've created for the SMS app

25. Click the 'Add' button on the pop up window to add a Field Condition, then double click on the listed Field Condition to edit.

**Contacts who have a linked contact in custom o...**

Twilio Test ▾

**Remove** **Add**

Double-click to edit this field condition

26. Choose 'Direction' for the Custom Object field you're wanting the Field Condition to check for, then choose 'Contains' for the second dropdown, and enter 'Incoming'. Click 'Finish' when completed.

**Contacts who have a linked contact in custom o...**

Twilio Test ▾

**Remove** **Add**

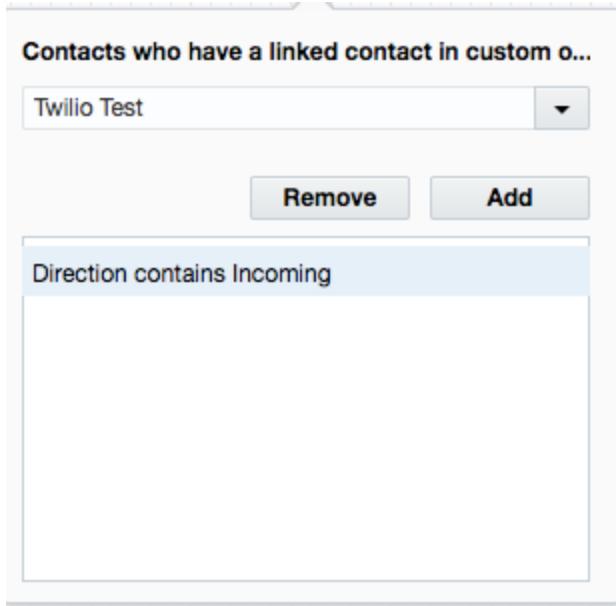

Direction ▾

not contains ▾

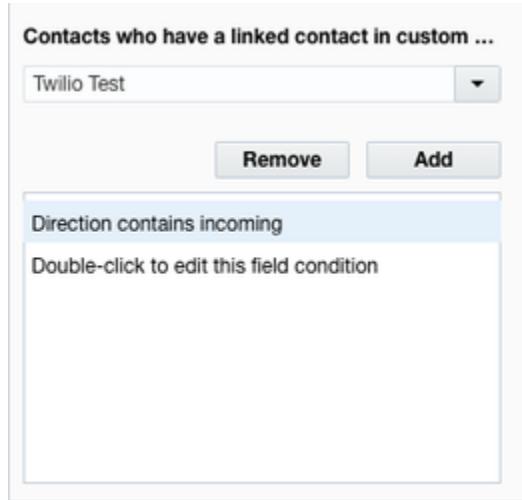

Incoming

**Finish**

27. The new Field Condition you created will now search in the 'Direction' field in your Twilio Custom Object for the word 'Incoming' (this means the segment will only be searching incoming messages rather than outgoing).

28. Click "Add" again to create a second field condition and double click on the listed Field Condition to edit.

29. Choose 'Message' for the Custom Object field you're wanting the Field Condition to check for, then choose 'Contains' for the second dropdown, and enter 'Stop'. Click 'Finish' when completed.

**Contacts who have a linked contact in custom ...**

Twilio Test

Remove Add

Message

not contains stop

Finish

28. Once this is done, repeat steps 23-29 again. On Step 29 have the Filter Criteria check the 'Message' field in of the CDO for the following universal opt out keywords: STOP, END, CANCEL, UNSUBSCRIBE, and QUIT. Follow these steps for each opt out keyword you would like the Field Condition to check for.

Example:

Has Linked Contact in Custom Object  
Contacts who have a linked record in custom object "Twilio Test" that matches 2 field conditions

OR

Has Linked Contact in Custom Object  
Contacts who have a linked record in custom object "Twilio Test" that matches 2 field conditions

OR

Has Linked Contact in Custom Object  
Contacts who have a linked record in custom object "Twilio Test" that matches 2 field conditions

OR

Has Linked Contact in Custom Object  
Contacts who have a linked record in custom object "Twilio Test" that matches 2 field conditions

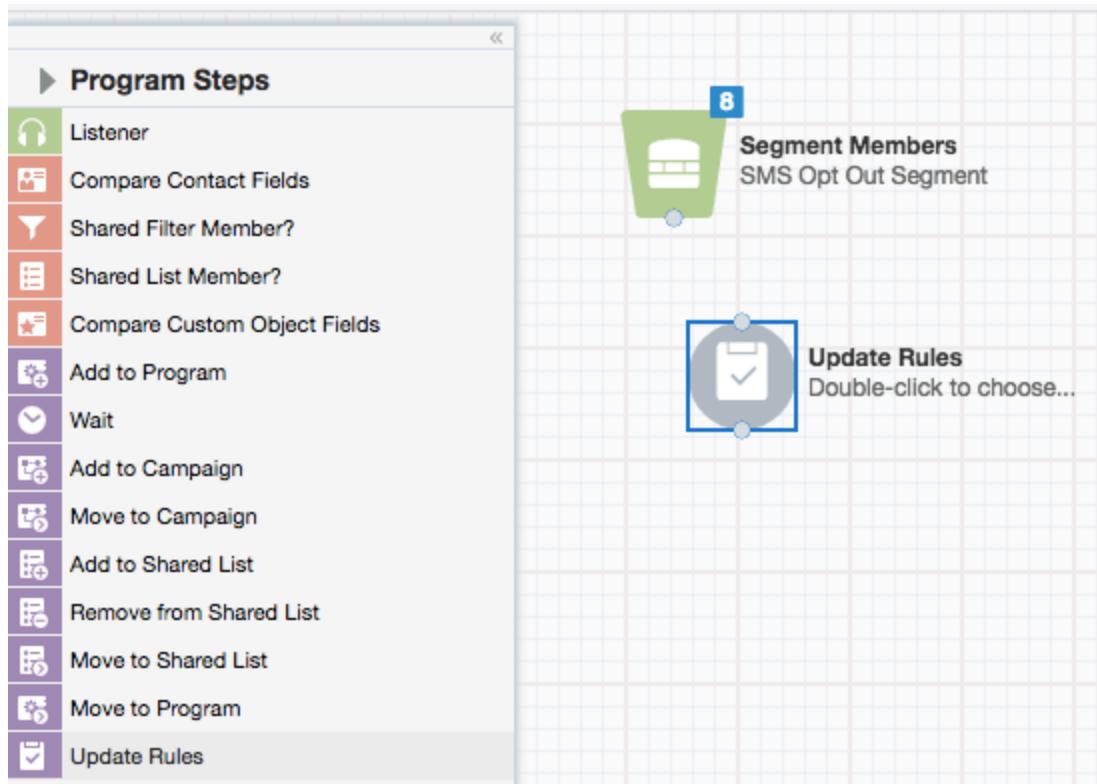

OR

Has Linked Contact in Custom Object  
Contacts who have a linked record in custom object "Twilio Test" that matches 2 field conditions

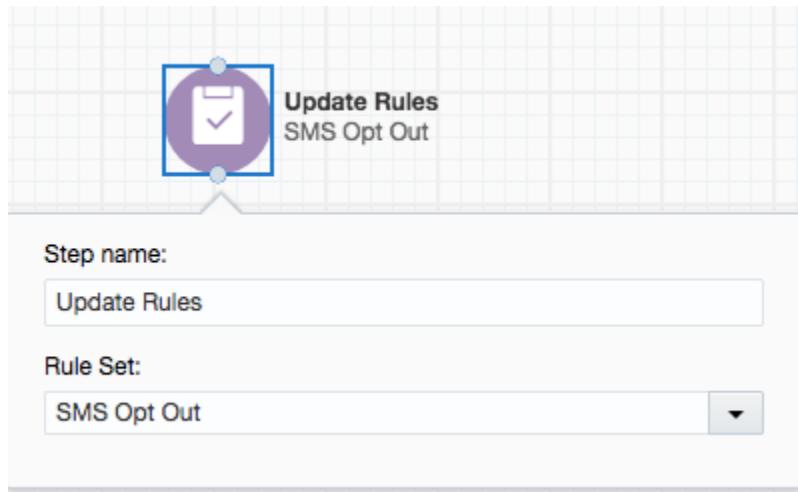

31. Once this is done, click 'Save' on the top right.

32. Now that the segment is created, you will now add the update rule you created at the beginning to the canvas. Go back to the Program Canvas and drag and drop an 'Update Rule' step onto the canvas below the Segment Step.

33. Double click the update rule step and select the 'SMS Opt Out' update rule you created.

34. Finally, drag a 'Wait' step onto the program canvas below the Update Rule. Double-click the wait step to change the length to 1 day.

Step name:

Choose how long contacts should wait in this step:

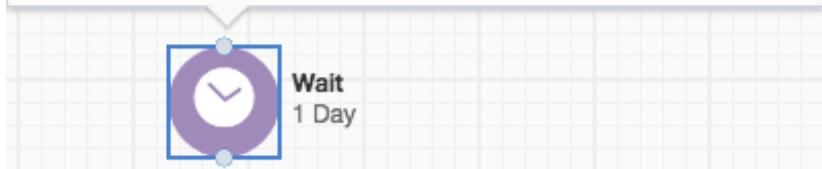

Wait for a set amount of time:

 Day(s) 

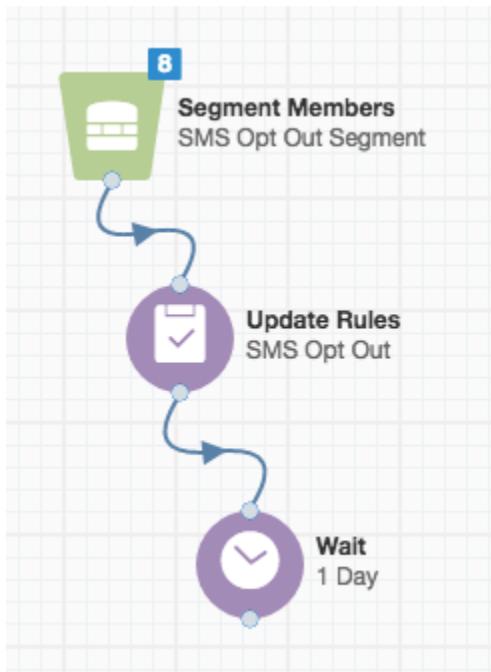

Wait until a specific date and time:

  : 

Time zone:

35. Once you've done this, link all of the steps together by connecting the dots at the top and bottom of each step, like so:

36. Double click the name of the program on the top left, currently titled 'Untitled Program', and change the name to 'SMS Opt Out Program'

37. Click 'Save' on the top right and then click 'Activate'. Your SMS Opt Out Program is now live

38. Now, when setting up a SMS configuration, on the last page of the configuration map the 'Opt-Out' dropdown menu to your 'SMS Opt Out' field. The application will check to see if the field is populated before sending a message out. If it is populated (meaning that user texted in an opt-out keyword), the message will not be sent.
